

Caliber C1500

Enhanced Liquid Deicer

Description

Caliber C1500 is a blend of a highly refined carbohydrate corn derivative with Calcium Chloride. Engineered for performance, it is not a waste or byproduct. **Caliber C1500** is engineered specifically for ice control uses and is free of foul odors, dark colors, and sediments that make other agricultural deicers difficult to work with.

Caliber C1500 meets Pacific Northwest Snowfighters (PNS) and MDOT specifications for liquid deicers.

Applications

Anti-icing/ Frost Prevention

Anti-ice with Caliber at 20-30 gallons per lane mile (10-15 gallons for frost prevention) and have confidence at any temperature. Typical applications should be performed at temperatures below 38 degrees.

Stockpile Treatment/ Prewet Systems

Reduce salt use and keep stockpiles free flowing by adding 6-8 gallons of **Caliber C1500** per ton of salt or salt/grit mix. Stockpile treatments and wetting at the spinner with **Caliber C1500** will allow salt to work at lower temperatures, activate more rapidly, and will provide greater residual effects- even at significantly reduced application rates.
